analyzed. In this paper, we have considered an adaptive rate system with a constant power. The presented analysis can be extended to variable power systems following [5], [21].

Mohamed Lassaad Ammari Mohamed Lassaad Ammari received the Engineering degree from the University of Carthage, Tunis, Tunisia, in 1995 and the M.Sc. and the Ph.D. Degrees from the Université Laval, Qubec City, QC, Canada, in 2000 and 2003, respectively. Since 2003 he has been a Research Associate with the Laboratory of Communications and Integrated Microelectronics, École de Technologie Supérieure, Montreal, QC. His research interests include channel equalization, multiple-input-multiple-output orthogonal frequency-division multiplexing systems, turbo detection, space-time coding, and adaptive modulation.

François Gagnon François Gagnon (S'87-M'87-SM'99) was born in Quebec City, PQ. Canada. He received the B. Eng. and Ph. D. degrees in electrical engineering from Ecole Polytechnique de Montreal, Canada. Since 1991, he has been a Professor in the Department of Electrical Engineering, École de Technologie Supérieure, Montreal, Canada. He has chaired the department from 1999 to 2001 and is now the holder of the Ultra Electronics (TCS) Chair in Wireless Communication in the same university. His research interest covers wireless high speed communications. modulation, coding, high speed DSP implementations and military point to point communications. He has been very involved in the creation of the new generation of High Capacity Line Of Sight military radios offered by the Canadian Marconi Corporation, which is now Ultra Electronics Tactical Communication Systems. The company has received, for this product, a 'Coin of excellence' from the US army for performance and reliability.
